

AMENDMENTS TO THE ABSTRACT

In the Abstract:

Kindly rewrite the Abstract as follows:

~~“Method for reinitializing count of thread reel length”~~

Method for Reinitializing Count of Thread Reel Length

ABSTRACT OF THE DISCLOSURE

This method is distinctive in that: the rotation speed (V_0) obtained with the ~~empty~~ reel empty is recorded beforehand; ~~and~~, after start-up, the rotation speed (V_d) of the reel that is being ~~formed~~ wound is measured; ~~this~~. The latter speed corresponds to the maximum speed reached at the end of ~~the~~ a start-up acceleration phase and at the start of ~~the~~ a gradual slowdown phase after the winding phase, and ~~[[,]]~~ this speed is compared to that obtained when the reel was empty ~~[[,]]~~. ~~[[if]]~~ If the rotation speed (V_d) measured after start-up is substantially equal to or greater than the rotation speed (V_0) obtained when the reel was empty, length metering is then reset ~~[[,]]~~. ~~[[if]]~~ If the speed after start-up is substantially less than the rotation speed obtained with the reel empty, metering is resumed from ~~the~~ a point where it stopped.
